

# Take Our Children to Work Day

Revolutionizing the Workplace

Greetings!

Marshall Space Flight Center is happy to provide another opportunity for an exciting, enriching, as well as educational experience for our daughters and sons. Take Our Children to Work Day provides a unique occasion to introduce our children to the exciting things that we do at the Center and to interest them in careers that will be important to their future and the future of our nation.

This year we have planned many special activities such as cryogenic and propulsion demonstrations using liquid nitrogen, experiments on the states of matter using dry ice, and a visit to the Huntsville Operations Support Center (HOSC) where the students will learn about shuttle launch operations and earth to Space Station interaction at the Payload Operations Integration Center (POIC).

This is the one day of the year that our children can see what we do when we are at work and to learn about the unlimited career choices that their futures hold. The exposure that we are providing to our children will contribute in a positive way and will help them in their journey to revolutionizing the workplace!

Have a fun and safe day at Marshall.

Cordially,

Abbie J. Johnson
